measuring pact's mission
2021

In 2021, Pact marked its 50th anniversary. As we reflected on five decades of improving lives around the globe, we noted the many ways that international development has progressed.

While Pact has always worked to ensure our efforts are truly serving communities, one important change has been an increased reliance on data and evidence. Backed by advances in technology and our deep commitment to listening to those we serve, now more than ever, data and evidence are at the heart of Pact's work. This starts with how we design our programs and carries through as we learn and adapt during implementation and as we measure our ultimate results.

Our methods range from qualitative to quantitative, and whenever possible, we advance participatory action research to manage programs adaptively and to ensure skills are passed on and information is of utility to those we serve. For example, in Zambia, to maintain HIV case identification and linkages to treatment, we greatly expanded utilization of a risk assessment tool to help identify those of highest risk. This enabled us to target testing services more effectively. In Cambodia, we used survey research to measure progress in women's economic and civic empowerment. We compared baseline and midline data to adjust program strategies, which were presented in participatory learning reviews with project partners. This has resulted in a quantitative improvement in measures of participant empowerment, the identification of activities that yield the greatest impact, and improvements in reaching targeted populations and in digital civic engagement approaches. And in Colombia, we used a complexity-oriented methodology with indigenous organizations to uncover unexpected outcomes, which

will improve program effectiveness by identifying the most promising approaches to capacity development for key partners.

Our belief in the power of data and evidence to create lasting impact is why for the past 11 years we have measured and shared the results of our global programming in our annual *Measuring Pact's Mission* report. The data that follow explain the impact of our work for the 2021 fiscal year, from October 2020 to September 2021. This includes results from our global indicators in the areas of health, livelihoods, the environment, capacity development, governance, business and markets, and energy. We also share our results by location.

As we look ahead to the coming decades, we know that data and evidence will continue to play a central part in our efforts to build thriving, resilient and engaged communities leading their own development.

FOR MORE INFORMATION ABOUT OUR METHODOLOGY, CONTACT OUR LEARNING, EVIDENCE AND IMPACT TEAM, LEAP@PACTWORLD.ORG.

our 2021 impact

 **health** We support vulnerable people to access the health and social services they need to enjoy a healthy life.
1,906,822 people with improved access to health and social services

 **livelihoods** We empower people with limited livelihood choices to gain the resources they need to become income-secure.
1,369,032 people with increased net income and savings

 **environment** We partner with resource-dependent communities to help them gain lasting benefit from the sustainable use of the natural resources around them.
2,759,624 people benefiting from improved natural resource management

 **capacity development** We help systems, organizations and individuals learn, adapt and create sustainable development outcomes.
2,760 partner organizations with improved capacity

 **governance** We support an enabling environment that fosters inclusive, transparent and accountable governance.
1,074,210 citizens participating in initiatives that resulted in positive civic and state-society engagement

 **business and markets** We tap into the power of markets as a positive force for development.
77,145 people served by mining projects

 **energy** We work toward a future where all people can enjoy the benefits of modern energy.
172,367 people with increased access to energy

health

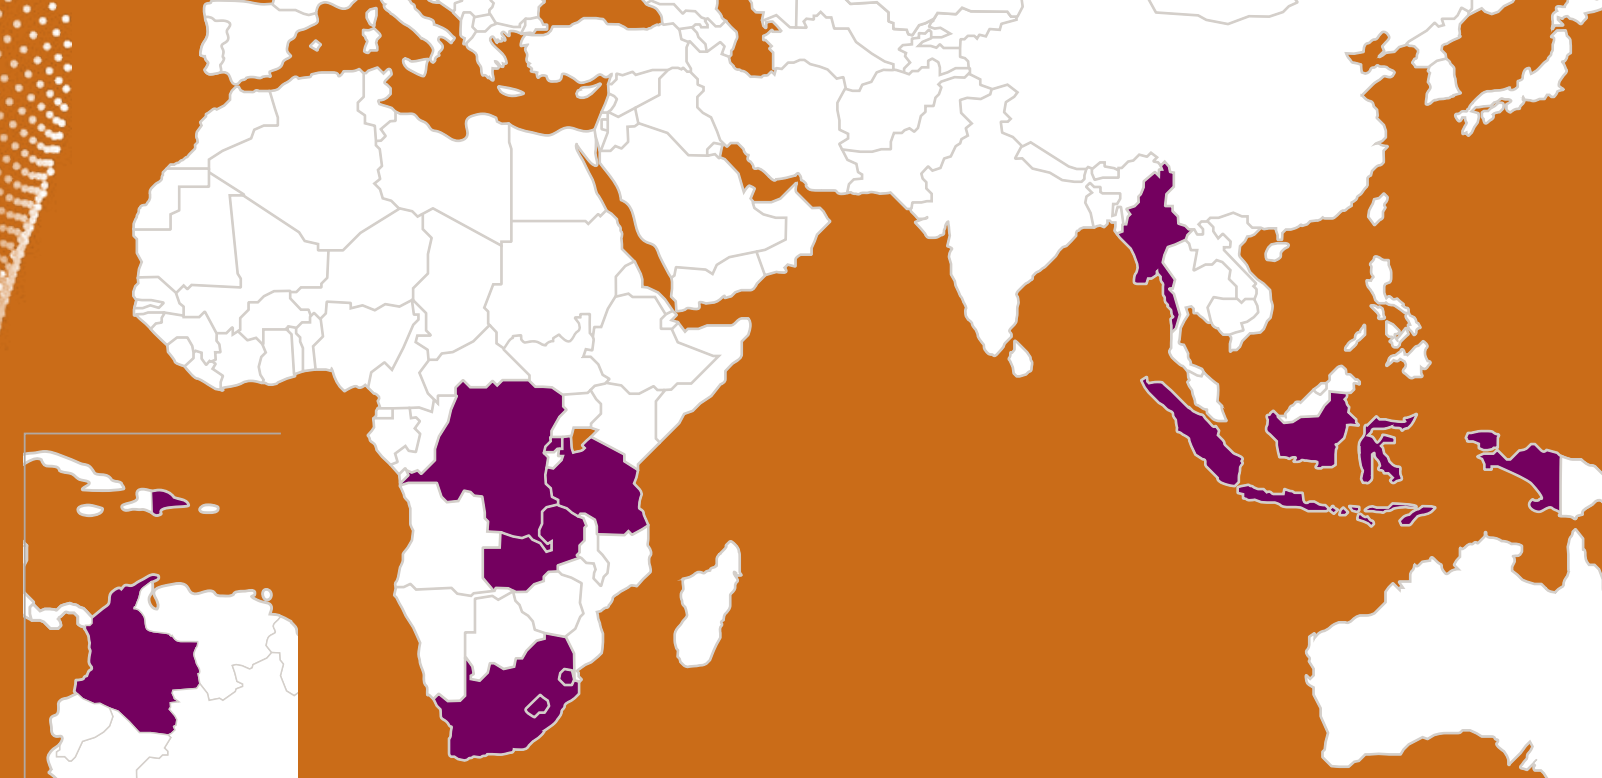

We helped connect nearly **2 million people** with health and social services, and we strengthened more than **800 health and social systems**.

Achieving good health and well-being requires working toward healthy lives for all ages around the world. Pact works at national and

sub-national levels to improve inclusive and equitable access to health and social services, enabling stakeholders to develop local solutions. We achieve this through collaboration with civil society organizations, government agencies, community groups, and private and faith-based service providers. Pact pioneers sustainable community-led HIV/AIDS and health programming that highlights and meets the needs of vulnerable children, adolescents, pregnant and breastfeeding women, caregivers and families, and key populations. Our integrated community-based solutions have also been instrumental in facilitating community response and resilience to public health shocks and stresses such as the Covid-19 pandemic.

livelihoods

With Pact's support, more than **1.3 million people** raised their income and more than **40,000 groups** improved their financial situation.

Economic, environmental and social resilience and empowerment are at the core of people's

ability to own their future, especially for women, youth and disadvantaged groups. Pact works hand in hand with the communities we serve, co-creating sustainable responses to improve their livelihood opportunities, resilience, human capital development and access to finance and markets.

environment

More than **2.7 million people** benefited from improved natural resource management because of Pact, and more than **2.7 million hectares** were brought under improved management.

To make lasting change for the next generation, communities must have the skills, resources and opportunities to responsibly benefit from the natural resources around them, from fish to forests to mineral deposits. In partnership with local communities, governments, local organizations and the private sector, we foster sustainability in agriculture and forestry supply chains; strengthen local capacity and effective community-based natural resource management governance systems; and help people develop alternative and sustainable climate-resilient, nature-based enterprises.

capacity development

Pact helped nearly **2,800 local organizations**, government agencies, networks and community committees strengthen their capacity.

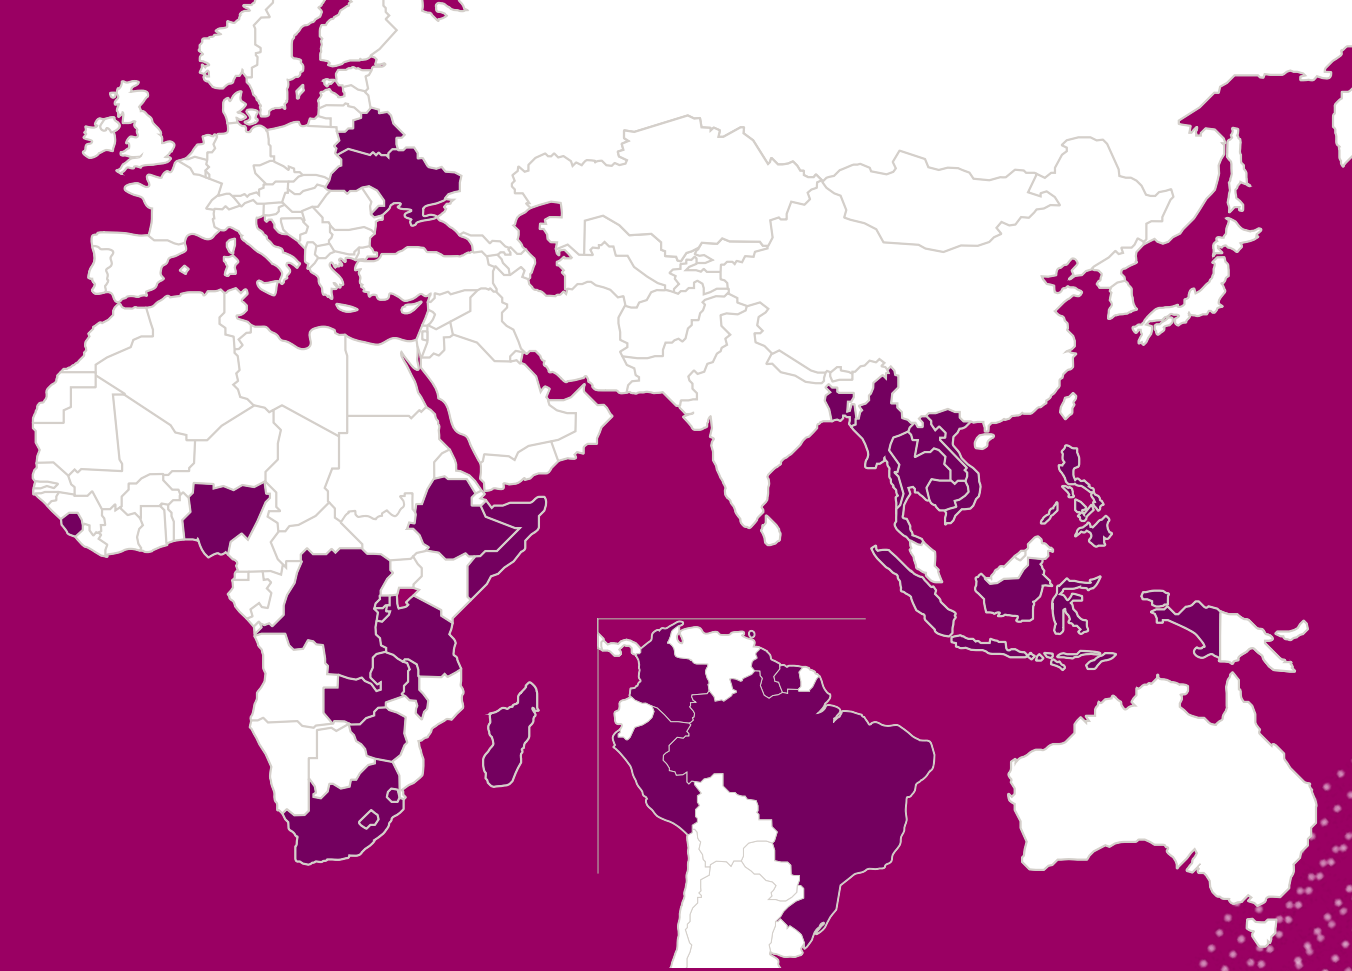

To sustainably transform communities and systems, they must become self-reliant. Pact views capacity development as an inclusive process, approach and outcome. Capacity development must be intentional, go beyond knowledge transfer, rely on co-creation and co-implementation, incorporate innovative technologies in creative ways and agilely work within complex, adaptive systems. Pact's capacity development work is holistic and intersects all of our programming to best meet the needs of our local partners and to bring them to the forefront in this process.

governance

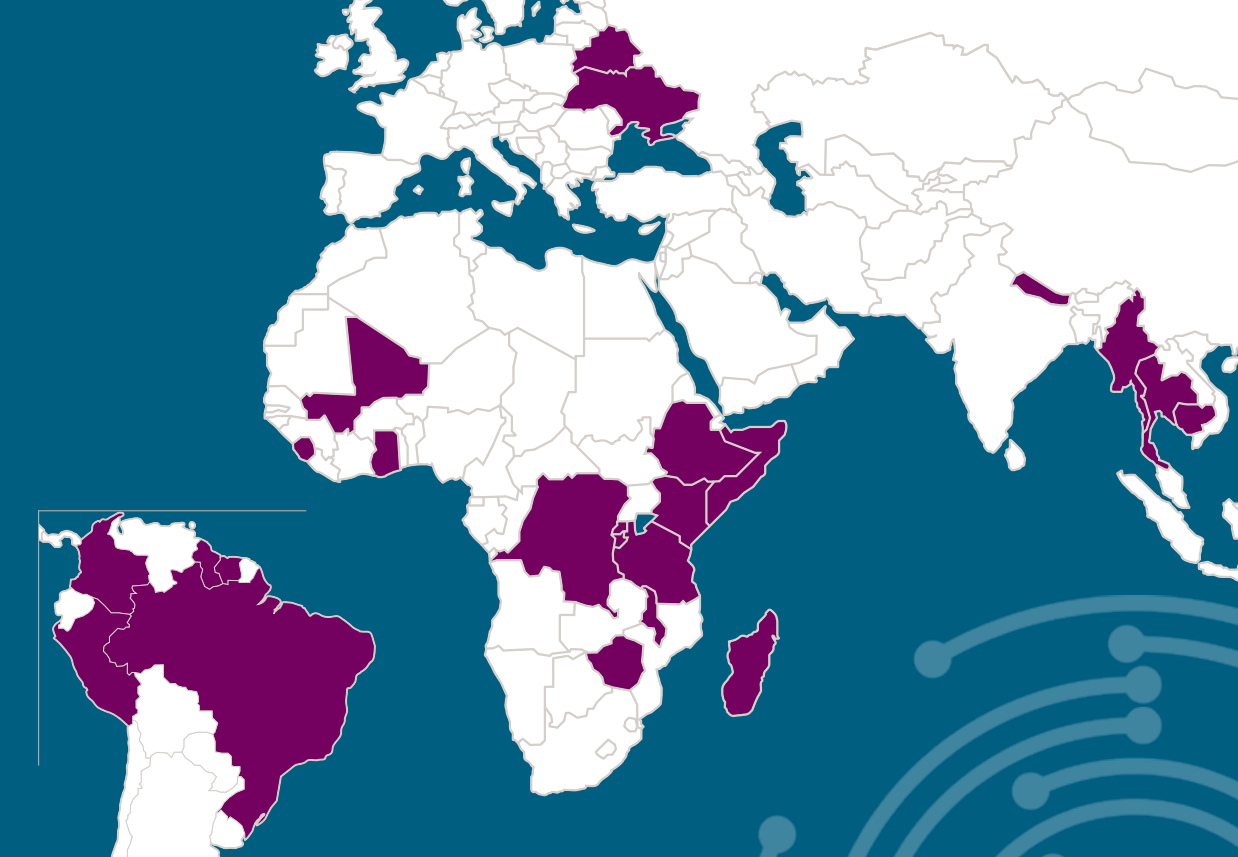

Our governance programming enabled more than **1 million citizens** to take part in nearly **2,500 initiatives** that resulted in positive civic and state-society engagement.

Open, transparent and accountable governance systems are key to fully inclusive local development. Pact partners with civil society, media and government to expand space for

democratic participation and foster constructive civic behaviors at local and national levels. We support local peace activists to foster healthy social dialogue as the basis for resolving intra- and inter-communal conflicts, including conflicts that cross national borders. We help foster trust among coalitions of local actors - community groups, civil society, governments, private sector - to address difficult collective action challenges. This includes partnering with underrepresented communities such as youth, women, ethnic religious minorities, indigenous peoples and migrant communities to demand accountability and claim essential services and basic rights.

markets

Pact projects leveraged business and markets as a force for positive change and helped improve the lives of more than **77,000 artisanal and small-scale miners.**

Using markets as a positive force for development means that communities have the systems and opportunities that they need to achieve the change they desire. Pact's mining program brings together government, industry and miners – both men and women – to make artisanal and small-scale mining (ASM) safer, formal and more productive and to address challenges such as child labor in mining. Pact's efforts are helping to reveal and make the most of ASM's contributions to development in communities around the globe.

energy

With Pact's support, nearly **175,000 people** increased their access to energy and/or increased their means to use it productively.

Energy is an essential resource for all people. Without access to reliable, sustainable and affordable sources of energy, starting or growing a business, delivering modern health care, or

enjoying basic comforts such as lighting are out of reach for more than one billion people. Pact collaborates with governments, companies, investors and other civil society organizations to connect supply and demand for energy, remove market distortions and work toward a future where all people can enjoy the benefits of modern energy.

Pact is an international nonprofit that works in nearly 40 countries building solutions for human development that are evidence-based, data-driven and owned by the communities we serve. Founded in 1971, Pact works with partners to build resilience, improve accountability, and strengthen knowledge and skills for sustainable social impact.
