**What is Corona Virus?**
It is a new flu-like virus that can cause severe illness in some people, but most people experience mild to moderate flu-like symptoms which should be managed at home.

**How does Corona Virus spread?**
Transmission is human-to-human: This virus spreads faster when an infected person’s sneeze or cough droplets come into contact with others.

**Who is at risk of getting the virus?**
Everyone is at Risk. Severe infection is more common in the elderly and in people who are chronically ill (heart condition, diabetes, high blood pressure, Cancers, HIV, asthma, TB and pneumonia)

**When to seek medical care**
When you have difficulty in breathing should you seek medical care immediately by calling and arranging an appointment with your health care provider or dial 977. Otherwise stay at home and self-isolate.

**Preventing the spread of the virus**
